Homework 2

Question 2.1

G_{integer} – develop left-most grammar for 4520

Integer \Rightarrow *Integer Digit*

\Rightarrow *Integer Digit Digit*

\Rightarrow *Integer Digit Digit Digit*

\Rightarrow *Digit Digit Digit Digit*

\Rightarrow 4 *Digit Digit Digit*

\Rightarrow 4 5 *Digit Digit*

\Rightarrow 4 5 2 *Digit*

\Rightarrow 4 5 2 0

Assuming the first line is the first “step”, 8 steps are required for this derivation. Generally speaking, $2d$ steps are needed to derive an integer with an arbitrary number of digits d .

Question 2.14

a2i – right-most derivation – Fig 2.7

Identifier \rightarrow *Letter {Letter | Digit}*

\rightarrow *Letter Digit Letter*

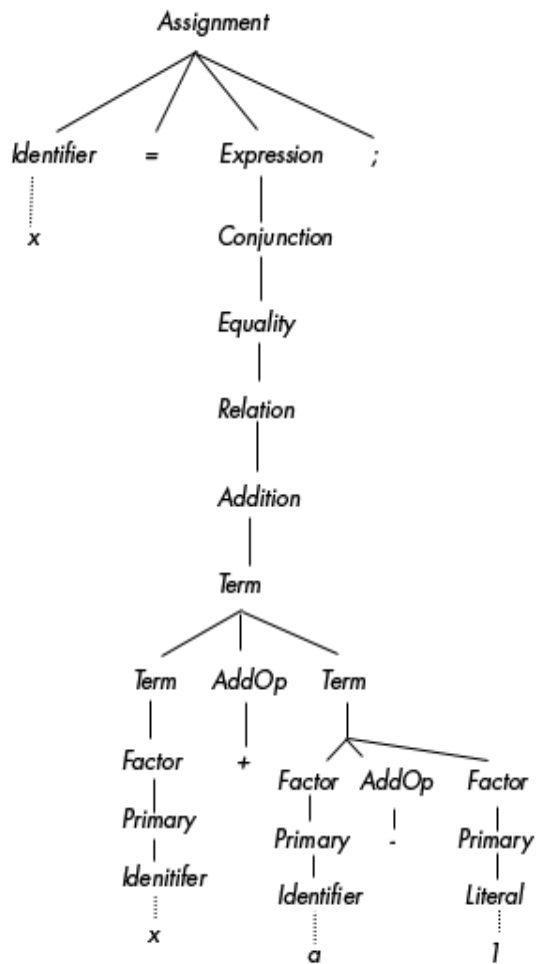

\rightarrow *Letter Digit i*

\rightarrow *Letter 2i*

\rightarrow a2i

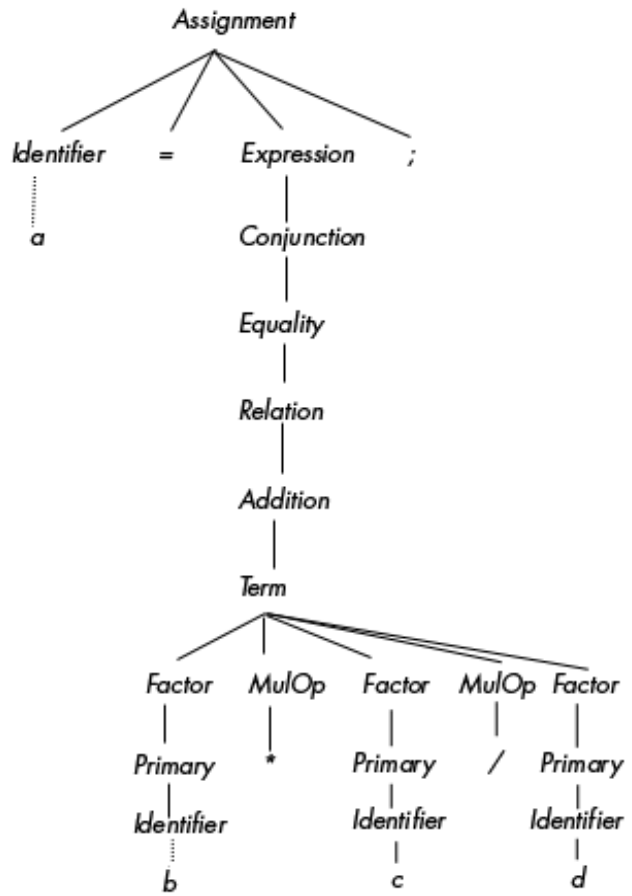

Question 2.5a

$x = x + a - 1;$

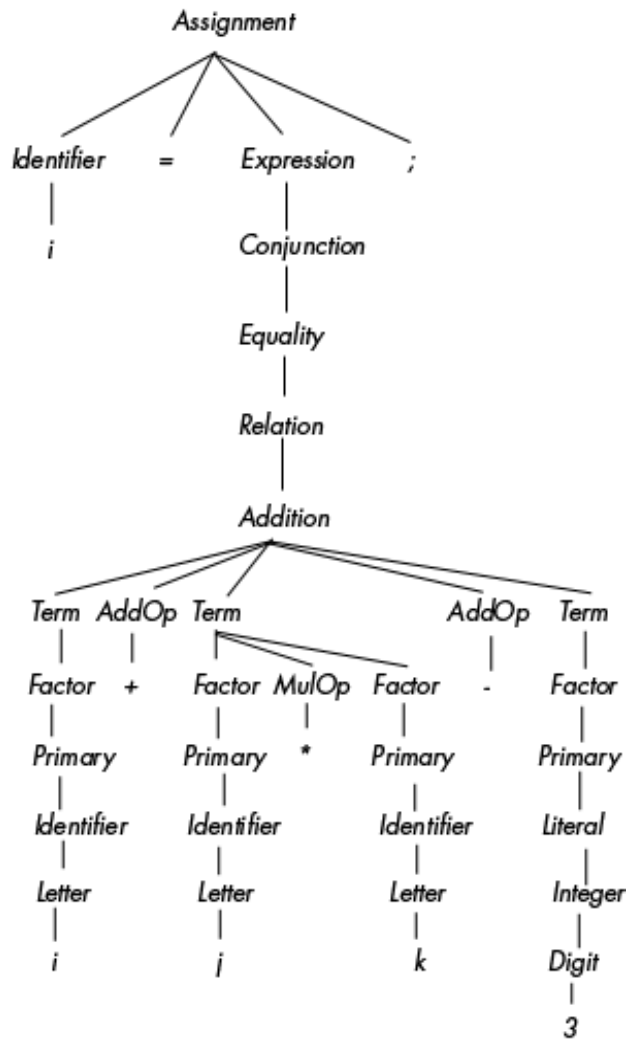

Question 2.5b

$a=b*c/d;$

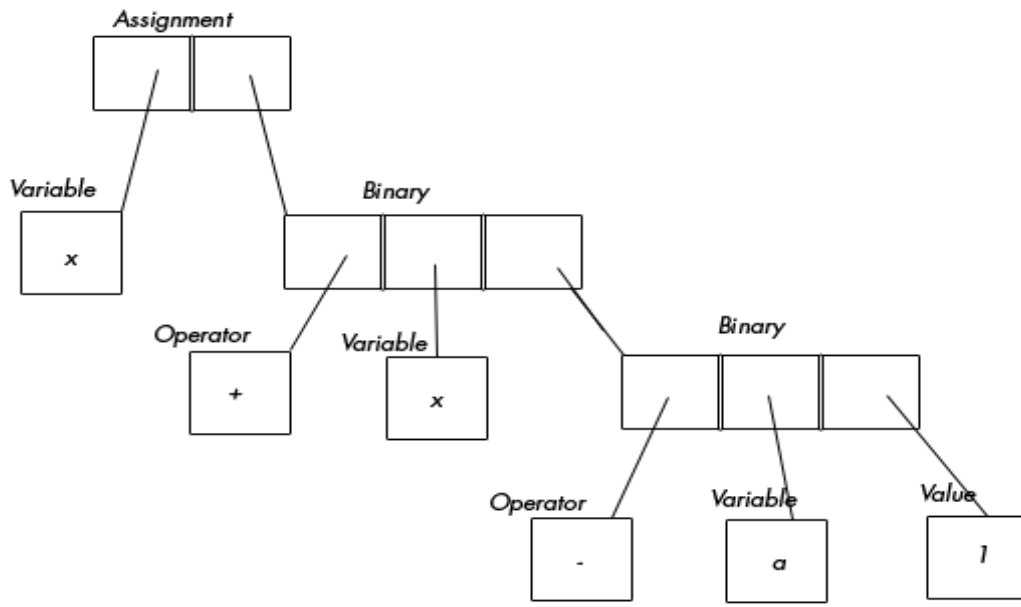

Question 2.5c

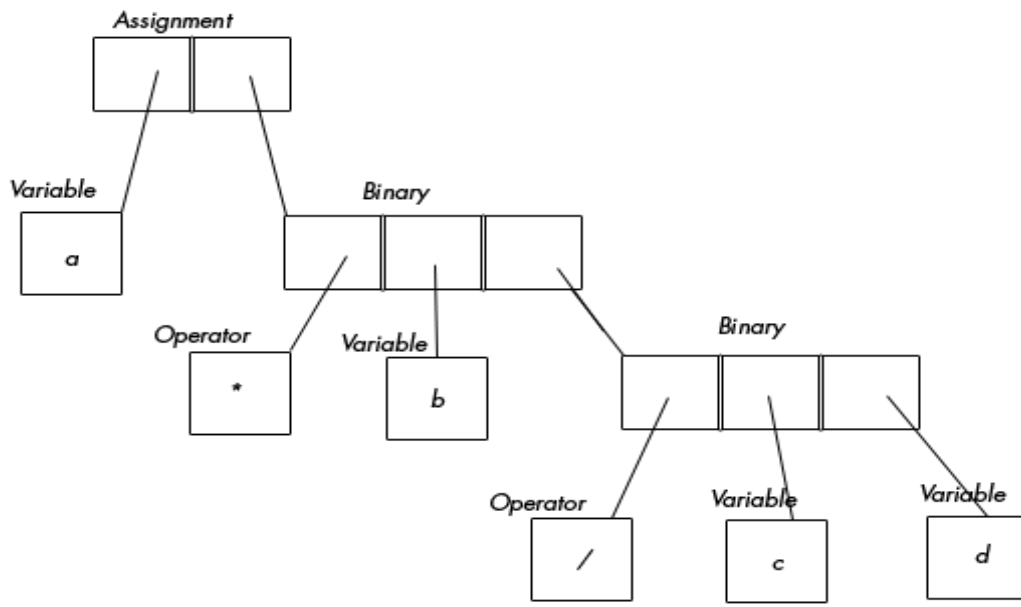

Question 2.20

$x = x + a - 1;$

$a = b * c / d;$

$l = i + j * k - 3;$
